**Target Group**

These instructions are intended for trained personnel and operators of systems for natural smoke ventilation (NRA / SHEV) (natural smoke exhaust system / smoke and heat exhaust system) and natural ventilation via windows, who are knowledgeable of operating modes as well as the remaining risks of the system.

**Warning and Safety Symbols in These Instructions:**

The symbols used in the instructions shall be strictly observed and have the following meaning:

- **Danger**
  - Failure to comply with the warning notes results in irreversible injuries or death.

- **Warning**
  - Failure to comply with the warning notes can result in irreversible injuries or death.

- **Caution**
  - Failure to comply with the warning notes can result in minor or moderate (reversible) injuries.

- **Note**
  - Failure to comply with the warning notes can lead to damage to property.

**Target Group**

Once the assembly and commissioning has been completed, the installer of a machine “power-operated window and door” shall hand these instructions over to the end-user. The end-user shall store these instructions in a safe place for further reference and use, if required.

**Warning**

This device is not intended for use by persons (including children) with physical, sensory or mental limitations or lacking experience and / or knowledge, unless they are supervised by a person who is responsible for the safety or were instructed by him on the usage of this equipment. Children should be supervised to ensure that they are not playing with this device. Cleaning and operator’s maintenance may not be performed by children without supervision.
INTENDED USE
Area of application / Scope of application
This drive is intended for the electromotive opening and closing of windows in facade and roof areas.
The main task of this product, in combination with a window and a suitable external control unit, is to evacuate hot smoke and combustion gases in case of fire, to safe human lives and protect material assets. Furthermore, with the electromotive operated window and a suitable external control unit, the natural ventilation of the building can be ensured.

NOTE

By attaching the drive to a movable element of the window a so-called “power-operated window” is created which, according to the Machinery Directive 2006 / 42 / EG, represents a machine.

Intended use according
The drive is intended for stationary installation and electrical connection at the window as part of a building.

In accordance with the Declaration of Conformity the drive, in combination with an external Control Unit from AUMÜLLER, is released for its proper use at a power-operated window for the following use:
- Application for natural ventilation
  - with an installation height of the drive and the bottom side of sash of at least 2,5 m above the floor, or
  - with an opening width at the HSK of the driven part of < 200 mm by a simultaneous speed of < 15 mm/s at the HSK in closing direction.
- Application as NSHEV (natural smoke and heat exhaust ventilator(s) for ventilation without dual purpose for ventilation in accordance with EN12101-2.

We as manufacturers are well aware of our duties and responsibilities regarding the development, manufacturing and placing of safe window drives on the market and consistently implement them. Ultimately, however, we have no direct influence on the usage of our drives. Therefore, as a precaution, we point out the following:

- The constructor or his agent (architect, specialist planner) are obligated to evaluate the hazards to persons, outgoing from the usage, installation position, opening parameters and from the external Control Unit of the power operated window, already in the planning phase and to establish necessary protective measures.
- The constructor / manufacturer of the machine “power-operated window” must implement the planned protective measures at the installation site or, if not yet established, determine them by it’s own responsibility and detect or minimize possible remaining risks.

The need for a risk assessment at the installation site due to the reasonably foreseeable misuse.

A risk assessment in accordance with the Machinery Directive 2006 / 42 / EG for the usage of the power-operated window for natural ventilation is absolutely necessary under the following conditions:
- the installation height of the drive and lower edge of casement < 2,5 m above the floor and one of the following conditions:
  - the opening width at the HSK > 200 mm, or
  - the closing speed at the HSK is > 15 mm/s, or
  - the opening speed at the HSK is > 50 mm/s, or
  - the closing force at the HSK is > 150 N

The following flow chart can be applied, which also includes the protective measures in accordance with EN 60335-2-103/2016-05.

Pay attention to possible hazards on tilting or rotating windows, whose secondary closing edges are located at less than 2,5 m installation height above the floor, under consideration of the Control Unit and usage!
**Casement data**

**Facade:**
- bottom-hung window / top-hung window
- side hung window

**Roof:**
- roof window / sky light

**Opening direction:**
- inward opening / outward opening

**Profile material:**
- aluminum, steel, plastic or wood.

The casement measurements supplied are only for orientation purposes. It is imperative that the **force-path diagram** of the drives are observed.

**NOTE**

When inspecting the drives for conformity with on-site requirements the following items must be observed:

- total weight of casement (glass + frame),
- additional loads: snow load / wind load (suction / pressure),
- casement size (FAB x FAH),
- side ratio FAB / FAH,
- installation / inclination angle,
- required opening area (geometric / aerodynamic),
- crosswind influences,
- driving force and stroke,
- mounting site at the window frame and casement frame.
**SAFETY INSTRUCTIONS**

It is important to follow these instructions for the safety of persons. These instructions shall be kept in a safe place for the entire service life of the products.

**WARNING**

**Risk of crushing and entrapment! Window can close automatically!**

The integrated load cut-off stops the drive during closing and opening when the drive is overloaded.

The compressive force is absolutely sufficient to crush fingers in case of carelessness.

**NOTE**

**Area of application**

The drive shall only be used according to its intended use. For additional applications consult the manufacturer or his authorized dealer.

Do not misuse the drive for other lifting operations! Do not allow children to play with this drive or its regulating and / or control units, including the remote control!

Always check whether the system complies with current regulations. Special attention must be paid to the opening width, the opening area, the opening time and the opening speed of the window, the temperature range of the drives / external devices and cables as well as the cross section of the connecting cables as function of the cable length and power consumption.

All devices must be permanently protected from dirt and moisture, if the drive is not explicitly suitable for use in wet areas (see technical data).

**Installation**

These instructions address expert and safety-conscious electricians and / or qualified personnel knowledgeable in electrical and mechanical drive installation.

The safe operation, avoidance of injury to persons and damage to property, as well as risks, is only guaranteed by proper installation and setting according to these installation instructions.

All specifications for installation must be checked independently and, if necessary, adjusted at the installation site. The connection assignment, the electrical supply data (see machine plate) and performance limits (see technical data) as well as the mounting and installation instructions of the drive must be strictly observed and adhered to!

Never connect 24 V DC drives to 230 V AC mains voltage!

**Danger to life!**

Do not reach into the window rabbet or the operating element (chain or spindle) during installation and operation! Ensure that, based on the installation position and the opening movement of the casement, persons cannot be trapped between the driven part of the window and surrounding fixed components (e.g. wall).

**Mounting material**

The required mounting material must to fit with the drive and occurring load and, if necessary, supplemented.

Before installing the drive, check whether the casement is in good mechanical condition, the weight in balance and whether it opens and closes easily!

---

**Danger spots by crush and shear points**

<table>
<thead>
<tr>
<th>Side-hung</th>
<th>Bottom-hung</th>
<th>Roof windows / skylight domes</th>
<th>Louvre windows</th>
</tr>
</thead>
</table>

Danger spots: crush and shear points according to DIN EN 60335-2-103
Crush and shear points
To avoid injuries, **crushing and shear points** between casement and frame must be secured against entrapment up to an installation height of 2,5 meters above the floor with appropriate measures. This can be achieved e.g. by using contact-based or contactless protective devices against entrapment, which stop the motion through contact or through interruption by a person. At a force higher than 150 N at the main closing edge the motion must stop within 20 mm. A warning symbol at the opening element must indicate this clearly.

Unintentional or independent opening or falling
Casements are to be hinged or secured such way that in case one of the mounting elements fails it will not crash / slam down or move in an uncontrolled manner by e.g. using double suspensions, safety scissors, casement stays.
Tilting windows shall be equipped with safety scissors or similar devices to avoid damages and risks of injury for persons through improper installation and operation. The safety scissors must be adjusted to the opening stroke of the drive (see technical data) to avoid blocking. The opening width of the safety scissors must be bigger than the drive stroke.

The movable casement must be secured against unintentional or independent opening as well as falling down.

Routing cables and electrical connection
Routing or installing of electrical cables and connections may be performed only by specialist companies. Never operate drives, control units, operating elements and sensors at operating voltages and connections contrary to the specifications of the manufacturer.
All relevant instructions shall be observed for the installation, specifically:
• VDE 0100 Setting up high-voltage systems up to 1000 V
• VDE 0815 Wiring cables
• Specimen Guideline on Conduits German designation (MLAR).

All-pole disconnecting devices shall be installed in the permanent electrical installation or external Control Unit for the drive.
The mains supply lines 230 V / 400 V AC shall be protected separately!

24V DC drives may only be connected to power supply sources that comply with SELV specifications.

In the case of tandem / multiple operation of drives connected in series, the cross-section of the connection cable must be checked autonomously, depending on the total current consumption of the drive system.

Damaged mains supply lines of drives with plug connectors may only be replaced by the manufacturer or qualified service / maintenance personnel!
Power cables which are fixed to the drive casing cannot be replaced. If the cable is damaged the device must be scrapped!

The types of cable, cable lengths and cross-sections shall be selected in accordance with the manufacturer’s technical data. If necessary, the cable types shall be coordinated with the competent local authorities and energy supply companies. Low-voltage lines (24 V DC) shall be routed separate from the high-voltage lines. Flexible cables may not be flush-mounted. Freely suspended cables shall be equipped with strain reliefs.

Cables must be laid such way that they cannot be sheared off, twisted or bent during operation. Drive cables laid inside window profiles must be protected by insulating tubes with a sufficient temperature resistance. Through holes shall be equipped with cable sleeves!

Clamping points shall be checked for tightness of threaded connections and cable ends. Access to junction boxes, clamping points and external drive control boxes shall be ensured for maintenance work.
Commissioning, operation and maintenance
After the installation and after each modification in the set up all functions shall be checked with a trial run. It shall be ensured that drive and casement are set correctly and that security systems, if available, are functioning properly. After the installation of the system is completed the end-user shall be introduced to all important operating steps. If necessary, he must be advised of all remaining risks / dangers.
The end-user shall be specifically instructed that no additional forces, except pushing and pulling forces in the opening and closing direction of the casement, may be applied to the spindle, chain or lever of the drive.

NOTE
Post warning signs!

During cleaning and maintenance works and while exchanging parts, all poles of the drive must be disconnected from the power supply and secured against unintentional reactivation.

Other persons must be kept away from the casement when a hold-to-run switch (pushbutton) is operated or when a window, which has been opened by a smoke and heat exhaust system, is closing!
The operating element of hold-to-run switches must be installed within direct view from the window, but apart from moving elements. If the switch is not a key-operated switch it must be installed at a minimum height of 1,5 m and inaccessible to the public!
Do not allow children to play with permanently mounted control devices and keep remote controls out of reach for children!

CAUTION

During cleaning, maintenance work and while exchanging parts the drive must be completely disconnected from the power supply and secured against unintentional reactivation.

WARNING

Do not actuate the drive or the casement when repair or re-setting works are performed!

Replacement parts, fasteners and controls
The drive shall only be operated with control devices from the same manufacturer. There is no liability, warranty or customer service if third-party parts are used. Exclusively original replacement parts of the manufacturer shall be used for mounting elements or expansions.

Ambient conditions
The product may not be subjected to impacts or falls, or to vibrations, moisture, aggressive vapors or other harmful environments, unless the manufacturer released it for one or more of these environmental conditions.

- Operation:
  Ambient temperature: -5 °C … +60°C
  Relative humidity: < 90% less 20°C;
  < 50% less 40°C;
  no formation of condensation

NOTE
Observe temperature range during installation!

- Transport / Storage:
  Storage temperature: -5°C … +40°C
  Relative humidity: < 60%

Accident prevention regulations and workmen’s compensation insurance guidelines
For work on or in a building or building part the provisions and instructions of the respective accident prevention regulations (local workmen’s compensation insurance guidelines) shall be observed and adhered to.

Declaration of Conformity and of Incorporation
The drive is manufactured and inspected in accordance with European guidelines. The respective Declaration of Conformity and of Incorporation is on hand.

In case that the use of the drive differs from the intended use, a risk evaluation for the power operated window shall be performed and a Declaration of Conformity according Machinery Directive 2006 / 42 / EG issued.
DATA SHEET SP8 S2 24V DC AND SP8-Z S2 24V DC

- Application: natural ventilation and SHEV
- Cut-off via limit switch
- "Z"-Version: Potential free NC contact for closed end position feedback (max. 24V, 500 mA)
- Preferably application for skylight domes

Options
- Rear suspension (only up to 500 mm stroke possible)
- Stroke reduction
- Protection rating IP65

OPTION: REAR SUSPENSION

The rear suspension is fitted at the factory.
Only up to 500 mm stroke possible!
DATA SHEET SP8-Z S2 230V AC

- Application: natural ventilation as single-drive
- Cut-off via limit switch
- Potential free NC contact for closed end position feedback (max. 24V, 500 mA)
- Parallel connection up to 8 drives in one group
- Preferably application for skylight domes
- Minimum basic length of housing for stroke s = 300 mm

**Options**
- Rear suspension (only up to 500 mm stroke possible)
- Stroke reduction (for s < 300 mm)
- Protection rating IP65

EXPLANATIONS ON THE Version „Z“ (FOR EXAMPLE SP8-Z S2 24V)

Drives with version „Z“ (e.g. SP8-Z S2 24V) have an additional volt free contact with connection for an external signal monitoring.

The volt free contact (max. 24V, 500mA) is open when the drive is in CLOSED position.

EXPLANATIONS ON THE PRODUCT LABEL

The product label informs about:

- manufacturer’s address
- article reference number and name
- technical characteristics
- date of manufacturing with firmware version
- certifications
- serial number

NOTE

Never install and operate damaged products.

In the event of any complaints, please indicate the product serial number (SN) (see product label).

## Snow load on roof windows for SHEV-systems

Example: snow load = 60 kg  
(Casement area x Typical snow load)

Example calculation:  
Establish snow loading based on national standards /directives (in Germany according to DIN 1055-5)  
total weight = FG + snow load  
total weight = (40 kg + 60 kg) = 100 kg
Planning the opening angle for direct operation

This diagram is a general guide to help establish the most appropriate drive stroke for the opening width required. The specific installation conditions are to be observed. The opening angle for direct operating drives on the main closing edge (HSK) depends on:

- distance: in between hinges (BD) and activation point of drive
- stroke or the opening width at the activation point of drive
- casement height

Application at the following activation

<table>
<thead>
<tr>

Application on HSK frame bracket on frame

Application on HSK frame bracket on the transom

Components and parts supplied on site:
- Drive "A"
- Hinge "BD"
INSTALLATION STEP 1: INSPECTION BEFORE THE INSTALLATION

Important instructions for a safe installation. Observe all instructions, wrong installation may result in serious injury!

Storage of drives at the construction site
Protective measures against damages, dust, moisture or contamination shall be taken. Store drives immediately only in dry and well ventilated rooms.

Inspection of drives before installation
Check drives and window before installation for good mechanical condition and completeness. The chains / spindles of the drives must be extendable or retractable easily. The casement must run smoothly and the weight must be in balance.

We recommend the use of our test kit for the inspection of drives with the rated voltage 24V= / 230V~ (see table below). Damaged products may not be operated under any circumstance.

<table>
<thead>
<tr>
<th>Test kit for drives</th>
</tr>
</thead>
<tbody>
<tr>
<td>Order number:</td>
</tr>
<tr>
<td>Application:</td>
</tr>
<tr>
<td>Supply voltage:</td>
</tr>
<tr>

</tr>
<tr>
<td>Ambient temperature:</td>
</tr>
<tr>
<td>Plastic housing:</td>
</tr>
<tr>
<td>Weight:</td>
</tr>
<tr>
<td>Feature / equipment:</td>
</tr>
</tbody>
</table>

The test procedure of drives may only be performed on a non-slip and secured mat or a test fixture. During the test run the test element must not be interfered with. The test my only be conducted by or under the supervision of expert personnel.

For testing chain drives the chain must be extended and retracted at an angle of approx. 90°. The spindle tubes of spindle drives in round housing tubes must be secured against independent spinning before starting the test to avoid deviations in the position encoder.

Inspection of the intended use
The planned use of the drive must be checked for compliance with its intended use. If used otherwise the liability and warranty claim expires.

Predictable misuse
It is imperative that foreseeable misuse of drives is avoided! Here are a few examples:
- do not connect 24 V DC drives to a 230 V AC mains voltage,
- observe synchronous run and sequence control by drives with multiple interconnection,
- use drives only indoors,
- avoid additional force influences, e.g. transverse forces.

Testing mechanical requirements
Prior to the start of the installation check whether:
- the support surface and the profile static for the load transmission is sufficient,
- a support construction for the secure fastening of the drives is required,
- cold bridges (thermal separation) are avoidable at action points,
- there is sufficient space for the swivel movement of the drive.
If not, counter measures must be taken!

The support surface of the frame brackets or casement brackets must rest completely on the window or frame profile. There must be no tilting of the fastening elements during extension and retraction of the drives. A safe and solid fastening must be ensured at the window profile.

It is imperative that the sufficiently mechanical stiffness of the fastener type as well as of the swivel range of the drive is observed.

If this is not guaranteed another type of fastening or another type of drive must be selected.
**INSTALLATION STEP 2: INSTALLATION PREREQUISITE AND INSTALLATION PREPARATION**

The following conditions must be fulfilled for the installation of the drives so they can be properly assembled with other parts and constructed to a complete machine at the window without impairing the safety and health of persons:

1. The design of the drive must fulfill the requirements.
2. The fastening accessories (casement brackets or frame brackets) must fit the window profile; the profile-dependent hole lay-out must be complied with.
3. The space required for the installation of the drive on the frame and casement profile must be sufficient.
4. The window must be in perfect mechanical condition before the installation. It should open and close easily.
5. The fastening material for the installation of the drive must fit the window material (see table).

### Scope of delivery:
Prior to assembly, check items quantity in the delivery for completeness.

### Tools required
- Marker,
- Grains,
- Hammer,
- Screwdriver (slotted-head-, cross- or Torx) size by site conditions,
- Hexagonal wrench size 2,5 / 3 / 4 / 5,
- End wrench for SW 13, SW 14,
- Torque wrench,
- Power drill,
- Threadlock adhesive,
- possibly a tool for blind rivet nuts (size 6).

### Check window data on site
- Measure FAB and FAH.
- Check / calculate weight of casement. If unknown, it can be determined approximately with the following formula:

\[
G = \frac{F \times s \times a}{2,5 \times 1,1}
\]

- Check / calculate the required drive force and compare with drive data. If unknown, it can be determined approximately with the following formula:

\[
F = \frac{5,4 \times G \times s}{a}
\]

- **Facade**
- **Roof**

- **a** = Distance of action point to hinges
- **F** = Drive force
- **s** = Stroke

### Wood windows
- Wood screws:
  - i.e. DIN 96, DIN 7996, DIN 571
  - round head with slot,
  - round head with cross,
  - hex head, special type

### Steel, stainless steel, aluminium windows
- Self-tapping screws, thread screws, sheet-metal screws
  - i.e. ISO 4762, ISO 4017, ISO 7049, ISO 7085, DIN 7500
  - cylinder head with hex socket, internal serration (Torx),
  - Phillips head or external hex head
  - blind rivet nut

### Plastic windows
- Screws for plastic
  - i.e. DIN 95606, DIN 95607, ISO 7049, ISO 7085, DIN 7500
  - round head with cross, external hex head, Torx

### Recommendation:
- If possible, screw through two cavity webs

</tbody>
</table>
**INSTALLATION STEP 4:** **DRILL HOLES ACCORDING TO MOUNTING VARIANTS**

- Determine fastenings.
- Produce drill holes with appropriate cross-section. For the mounting dimensions please refer to the above-mentioned hole layout drawings (see chapter „INSTALLATION STEP 3“ or project-specific documents and drawings).

![Drill holes diagram]

- Carefully clear away drilling swarfs to prevent seals from being damaged. Avoid surface scratches, for example by using masking tape.

- Secure fasteners against loosening; e.g. by applying removable thread-locking compound such as “Loctite”.

**INSTALLATION STEP 5:** **CASEMENT BRACKET MOUNTING**

- Fit casement bracket Fxxx 1.

![Bracket mounting diagram]

- Make sure they are parallel to casement edge. „Casement bracket“ center and „spindle“ must be in line.
**Installation Step 6A: Frame Brackets Mounting with Terminal Screw B10**

**Frame Brackets**

- K57
- K57.2
- K57.3
- K59
- K92

**Terminal Screw B10**

- 1x clamping nut
- 1x clamping piece
- 1x cylinder head screw M6

**Instructions**

1. Position spindle drive SP8 in the frame bracket ②.
2. Insert clamping piece ⑤ - of the terminal screw B10 ③ - in the frame bracket ②.
3. Fit frame bracket Kxxx ②.
4. Make sure they are parallel to casement edge.
5. Insert clamping nuts ④ - of the terminal screws B10 ③ - must be completely inserted in the grooves of the spindle drive SP8.
6. Tighten the clamping piece ⑤ with cylinder head screws ⑥ (torque 2.0 to 2.5 Nm).

**Note:**

- Insert clamping nuts ④ - from terminal screw B10 ③ - on both sides in the grooves of the spindle drive SP8.
- Clamping nuts ④ - must be completely inserted in the grooves of the spindle drive SP8.
- Tighten the clamping piece ⑤ with cylinder head screws ⑥ (torque 2.0 to 2.5 Nm).

---

- SP8

---

**Image Notes**

- A diagram showing the mounting process.
- The image includes visual aids and diagrams to illustrate the mounting steps.
- Diagrams showing the placement of frame brackets, terminal screws, and clamping pieces.
- The instructions are accompanied by corresponding diagrams for clarity.

---

**Assembly Instruction**

Spindle Drive SP8
INSTALLATION STEP 6B: FRAME BRACKETS MOUNTING WITH CLAMP BLOCK

- Insert clamp block Bxxx on both sides in the grooves of the spindle drive SP8 and tighten with cylinder head screws (torque 4.0 to 4.5 Nm).
- Position spindle drive SP8 in the frame bracket Kxxx.
- Insert collar screw and tighten (torque max. 15 Nm).

Make sure they are parallel to casement edge.

Clamp block must be completely inserted in the grooves of the spindle drive SP8.
INSTALLATION STEP 7: CONNECT SPINDLE DRIVE WITH CASEMENT BRACKET

Mounting with casement bracket F1

- Attach spindle drive SP8 to the casement bracket F1.
- Insert the pin - from casement bracket F1.

! Pin - of the casement bracket F1 needs to slot in securely. The snap is audible.

- Optionally adjust the pressure ball - of the casement bracket F1 - with grub screw and the spring.

<table>
<thead>
<tr>
<th>1</th>
<th>6</th>
<th>7</th>
<th>8</th>
<th>9</th>
</tr>
</thead>
<tbody>
<tr>
<td>Casement bracket F1</td>
<td>1x pin</td>
<td>1x pressure ball</td>
<td>1x grub screw</td>
<td>1x spring</td>
</tr>
</tbody>
</table>

Mounting with casement bracket F10.6

- Attach spindle drive SP8 to the casement bracket F10.6.
- Screw in pin - of the casement bracket F10.6.
- Secure pin against loosening itself with e.g. thread-locking compound such as “Loctite”.

- Optionally adjust the pressure ball - of the casement bracket F1 - with grub screw and the spring.
**INSTALLATION STEP 8: ADJUSTMENT POSSIBILITY FOR DISCONNECTION**

- Loosen the lock nut 10 - of the spindle drive SP8.
- Manually turn eye bolt B16 11 inward or outward - depending on site conditions.
- Tighten lock nut 10 again.

![Image of installation step 8]

The limit switch 2 has to be pushed/activated when the window is closed.

**INSTALLATION STEP 9: CABLE ROUTING ON THE FRAME / TRANSOM**

Connection cable routing on the frame or transom:
- Cable must be protected against damage (shearing-off, kinking, splitting), i.e. by using bushings.

![Image of installation step 9]

Connection cable routing on the hinge side:
- Make sure that during opening or closing procedure the cable will not be damaged by shearing-off, kinking, crushing.
- Protect cable feedthrough in profile e.g. by using cable bushings, cable transitions.

Upon removal of the glazing bead is the danger that the glass may fall.
**Installation Step 10: Electric Connection**

Make sure when establishing the connection that there is no voltage at the terminals! Unused wires must be safely insulated!

The running direction of the drive may be changed by interchanging (polarity reversal) the wires „BN – (brown)” - „BU – (blue)”.

### Connection Assignment:

---

Assembly Instruction
Spindle Drive SP8
**Installation Step 11:**

**Supply Lines of Control Unit to the Drives**

Observe current regulations and guidelines e.g. DIN 4102-12 regarding the “Fire behavior of building materials-circuit integrity maintenance of electric cable systems” (E30, E60, E90) and the “Specimen Guideline on Conduits German designation - MLAR”, and also prescribed constructional regulations!

For safety reasons a cable of the next higher wire cross section should be selected.

<table>
<thead>
<tr>
<th>Recommendation</th>
</tr>
</thead>
</table>

**Formula to calculate**

the required wire cross-section of a supply line

\[
A_{\text{mm}^2} = \frac{I_{\text{A (total)}} \times L_{\text{m (length supply line)}} \times 2}{2 \times 0_{\text{V (voltage drop)}} \times 56 \text{ m} / (\Omega \times \text{mm}^2)}
\]

**Calculation example**

Available data:
- cut-off current per drive (i.e. 2 x 4.0A) from data sheet
- length to be bridged from the last window to the control unit (i.e. 10 meters)

\[
A = \frac{(2 \times 4.0A) \times 10m \times 2}{2.0V \times 56m / (\Omega \times \text{mm}^2)}
\]

\[
A = 1.42 \text{mm}^2 \rightarrow 1.5 \text{mm}^2 \text{ chosen}
\]

**Laying and connecting the drive cable**

- Avoid extreme temperature differences in the installation area (danger of condensation).
- Set clamping point close to window and ensure accessibility.
- Ensure expansion possibilities of the drive and the drive cable.
- Consider the cable length and the cross sections of the drives supply lines.

**Installation Step 12:**

**Safety Check and Test Run**

Check the mounted system for its safety; perform test run and commissioning.

**Safety test:**
- Connect operating voltage.
- Check fastening (frame brackets, casement brackets) for firm fit or tightening.

**Test run:**
- Visual inspection of casement movements.
- Stop immediately by malfunction!
- Pay attention to collision with facade construction and correct installation, if required.

**Risk evaluation:**

Before operating a power-operated window to which window drives were mounted, which were sold by the manufacturer as incomplete machines according to installation declaration, the possible risk to a hazard of persons must be determined, evaluated and minimized by taking appropriate technical measures in accordance with the Machinery Directive. Separate documents for performing a risk assessment can be downloaded from the homepage of Firm Aumüller Automatic GmbH (www.aumueller-gmbh.de).

**Operation of the power-operated window**

When operating the power-operated window safety instructions must be observed, specifically those pertaining to commissioning, operation and maintenance.
## Help in Case of Malfunctions, Repairs and Maintenance

Professional repair of a defect drive can only be performed at the manufacturer’s factory or manufacturer-certified specialist company. Unauthorized opening or manipulation of the drive terminates warranty.

1. Exchange defect drives or have them repaired by the manufacturer.
2. In case of problems during installation or normal operation the following table might be useful:

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes</th>
<th>Possible solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drive does not start</td>
<td>• Duration of mains power supply too short</td>
<td>• Adjust supply voltage as specified in the technical documentation</td>
</tr>
<tr>
<td></td>
<td>• Drive run direction not correct</td>
<td>• Check drive cables change polarity</td>
</tr>
<tr>
<td></td>
<td>• Connecting cable not connected</td>
<td>• Check all connection cables</td>
</tr>
<tr>
<td></td>
<td>• Power supply / Control Unit voltage incorrect, too high or too low (see data sheet)</td>
<td>• Check power supply unit and replace if necessary</td>
</tr>
<tr>
<td></td>
<td>• No mains supply to power supply unit / Control Unit (no voltage)</td>
<td>• Connect power supply</td>
</tr>
<tr>
<td></td>
<td>• Drive has shut down on overload</td>
<td>• First move drive in CLOSE direction</td>
</tr>
</tbody>
</table>

| Drive doesn’t start after having been in operation several times | Operating time has been exceeded, drive has been overheated | Wait until drive has cooled down and start again |
|                                                               | See possible solutions above associated with “Drive doesn’t start”         | See possible solutions associated with: “Drive doesn’t start” |

| Drive doesn’t close | Safety mechanism has been triggered | Release safety area for operation and briefly move the drive in OPEN direction |
|                    | See possible solutions above associated with “Drive doesn’t start”         | See possible solutions associated with: “Drive doesn’t start” |

| Drive travels uncontrolled in open and close direction | Residual ripple of power supply / Control Unit too high | Adjust drive voltage to the required value of drive. (values see data sheet of drive) |
|                                                        | Fault in power supply unit / Control Unit                 | Check output voltage of power supply unit or Control Unit |

## Maintenance and Modification

To ensure continuous function and safety of the drive periodic maintenance by a specialist company is required at least once a year (as mandated by law for smoke and heat exhaust systems). Operational readiness must be checked regularly. Frequent inspection of the system for imbalance and signs of wear or damages of cables and fastening elements must be performed.

During maintenance contaminations must be removed from the drive. Fastenings and clamping screws must be checked for tightness. Test runs during the opening and closing procedure of the devices must be performed.

The drive itself is maintenance-free. Defect devices may only be repaired in our factory. Only replacement parts of the manufacturer may be used.

When the connection cable of this device is damaged it must be replaced by the manufacturer or his customer service or a similarly qualified person to avoid endangerment.

It is recommended to conclude a maintenance contract. A sample maintenance contract can be downloaded from the homepage of **Firm AUMÜLLER AUTOMATIC GmbH** ([www.aumuelle-gmbh.de](http://www.aumuelle-gmbh.de)).

While cleaning the windows, drives may not have direct contact with water or cleaning agents. Drives must be protected from dirt and dust during the construction phase or renovations.

### Maintenance process

1. Open or extend power-operated casement completely.
2. Completely disconnect the system from the mains and secure it against automatic or manual activation.
3. Check windows and fittings for damages.
4. Check all mechanical fastenings (if required, observe information on torques in installation instructions).
5. Check electric drives for damages and contaminations.
6. Check connecting cables (drive cable) for:
   - tightness of the cable screw
   - functionality of the strain relief
   - damages
7. Check the mobility of hinges and fittings and re-adjust or apply lubricant, e.g. silicone spray (observe the instructions of the manufacturer of this window system).
8. Check peripheral seal, remove contaminations or replace.
9. Perform cleaning to maintain functionality (e.g. clean extending elements of the drive, such as chains or spindles by damp wiping them with acid or lye-free agents and drying them and, if required, lubricate them with cleansing oil e.g., Ballistol).
10. Turn on operating voltage.
11. Open and close the power-operated window via the operating voltage (functional test).
12. If available, check and re-adjust protection systems of the safe guard fixture.
13. Check the intactness of the CE label at the power-operated system (e.g. SHEV/Natural smoke and heat exhaust ventilators).
14. Check the intactness of warning instructions and labels at the respective drive.
15. Perform a risk assessment in accordance with Machinery Directive 2006 / 42 / EG, if required, e.g. after modifying the machine.
DISMOUNTING

The drives are demounted by reversing the steps, as for the installation. The adjustments are omitted.

1. Completely disconnect the system from the power supply before demounting a drive.
2. After demounting a drive the window must be secured against independent opening.

Dispose of parts according to the locally applicable legal provisions.

DISPOSAL

According to the European Directive 2012/19 / EU on Waste Electrical and Electronic Equipment (WEEE) and its transposition into national law, obsolete electrical appliances must be collected separately and sent for environmentally friendly recycling.

LIABILITY

We reserve the right to change or discontinue products at any time without prior notice. Illustrations are subject to change. Although we take every care to ensure accuracy, we cannot accept liability for the content of this document.

WARRANTY AND CUSTOMER SERVICE

In principal apply our:

„General Terms for the Supply of Products and Services of the Electrical Industry (ZVEI)“.

The warranty corresponds with legal provisions and applies to the country in which the product has been acquired.

The warranty includes material and manufacturing defects incurred during normal use.

The warranty period for delivered material is twelve months.

Warranty and liability claims for personal injuries or material damages are excluded, if caused by one or more of the following:

- No proper incoming goods inspection.
- Improper use of the product.
- Improper installation, commissioning, operation, maintenance or repair of the product.
- Operating the product by defect and improper installed or not functioning safety and protection devices.
- Ignoring instructions and installation requirements in these instructions.
- Unauthorized constructional modifications at the product or accessories.
- Disaster situations due to effects of foreign bodies and Acts of God.
- Wear and tear.

Contact persons for possible warranty claims, for spare parts or accessories are the employees of the responsible branch office or the responsible person at Firm AUMÜLLER AUMATIC GmbH.
