**WARNING AND SAFETY SYMBOLS IN THESE INSTRUCTIONS:**

The symbols used in the instructions shall be strictly observed and have the following meaning:

- **DANGER**
  - Failure to comply with the warning notes results in irreversible injuries or death.

- **WARNING**
  - Failure to comply with the warning notes can result in irreversible injuries or death.

- **CAUTION**
  - Failure to comply with the warning notes can result in minor or moderate (reversible) injuries.

- **NOTE**
  - Failure to comply with the warning notes can lead to damage to property.

- **Attention / Warning**
  - Risk of crushing and entrapment during device operation (is provided as a sticker with the drive).

- **Attention / Warning**
  - Risk of damage to / destruction of drives and / or windows.

**TARGET GROUP**

These instructions are intended for trained personnel and operators of systems for natural smoke ventilation (NRA / SHEV) (natural smoke exhaust system / smoke and heat exhaust system) and natural ventilation via windows, who are knowledgeable of operating modes as well as the remaining risks of the system.

**WARNING**

Once the assembly and commissioning has been completed, the installer of a machine „power-operated window and door“ shall hand these instructions over to the end-user. The end-user shall store these instructions in a safe place for further reference and use, if required.

**WARNING**

This device is not intended for use by persons (including children) with physical, sensory or mental limitations or lacking experience and / or knowledge, unless they are supervised by a person who is responsible for the safety or were instructed by him on the usage of this equipment. Children should be supervised to ensure that they are not playing with this device. Cleaning and operator’s maintenance may not be performed by children without supervision.
INTENDED USE

Area of application / Scope of application
This drive is intended for the electromotive opening and closing of windows in facade and roof areas.

The main task of this product, in combination with a window and a suitable external control unit, is to evacuate hot smoke and combustion gases in case of fire, to safe human lives and protect material assets. Furthermore, with the electromotive operated window and a suitable external control unit, the natural ventilation of the building can be ensured.

By attaching the drive to a movable element of the window a so-called “power-operated window” is created which, according to the Machinery Directive 2006 / 42 / EG, represents a machine.

Intended use according
The drive is intended for stationary installation and electrical connection at the window as part of a building.

In accordance with the Declaration of Conformity the drive, in combination with an external Control Unit from AUMÜLLER, is released for its proper use at a power-operated window for the following use:

- Application for natural ventilation
  - with an installation height of the drive and the bottom side of sash of at least 2,5 m above the floor, or
  - with an opening width at the HSK of the driven part of < 200 mm by a simultaneous speed of < 15 mm/s at the HSK in closing direction.
- Application as NSHEV (natural smoke and heat exhaust ventilator(s) for ventilation without dual purpose for ventilation in accordance with EN12101-2.

Pay attention to possible hazards on tilting or rotating windows, whose secondary closing edges are located at less than 2,5 m installation height above the floor, under consideration of the Control Unit and usage!

We as manufacturers are well aware of our duties and responsibilities regarding the development, manufacturing and placing of safe window drives on the market and consistently implement them. Ultimately, however, we have no direct influence on the usage of our drives. Therefore, as a precaution, we point out the following:

- The constructor or his agent (architect, specialist planner) are obligated to evaluate the hazards to persons, outgoing from the usage, installation position, opening parameters and from the external Control Unit of the power operated window, already in the planning phase and to establish necessary protective measures.
- The constructor / manufacturer of the machine “power-operated window” must implement the planned protective measures at the installation site or, if not yet established, determine them by it’s own responsibility and detect or minimize possible remaining risks.

The need for a risk assessment at the installation site due to the reasonably foreseeable misuse.

A risk assessment in accordance with the Machinery Directive 2006 / 42 / EG for the usage of the power-operated window for natural ventilation is absolutely necessary under the following conditions:

- the installation height of the drive and lower edge of casement < 2,5 m above the floor and one of the following conditions:
  - the opening width at the HSK > 200 mm, or
  - the closing speed at the HSK is > 15 mm/s, or
  - the opening speed at the HSK is > 50 mm/s, or
  - the closing force at the HSK is > 150 N

The following flow chart can be applied, which also includes the protective measures in accordance with EN 60335-2-103/2016-05.
**PRELIMINARY REMARK**

The casement measurements supplied are only for orientation purposes. It is imperative that the force-path diagram of the drives are observed.

---

**Hazard analysis according to DIN EN 60335-2-103**

NSHEV according to EN12101-2 without dual purpose for ventilation

Use of the drive

Natural ventilation

Installation height of drive and lower edge of casement: > 2,5 m above floor (ZAA.20.2)

Opening at HSK: < 200 mm and speed at HSK: CLOSE < 15 mm/s / OPEN < 50 mm/s (20.ZAA.2)

Environment with children / vulnerable people

Risk analysis according to the Machinery Directive required

Hold-to-run switch: stops movement at HSK < 20 mm at a closing force of > 150 N at HSK (20.ZAA.5)

Operating element in direct range of vision: a.) Key switch or b.) other switch, then: installation > 1,5 m, inaccessible for public (7.12.1)

The information in the brackets refer to the chapters of DIN EN 60335-2-103.

---

**Casement data**

Facade: bottom-hung window / top-hung window / side hung window

Roof: roof window / sky light

Opening direction: inward opening / outward opening

Profile material: aluminum, steel, plastic or wood.

---

**NOTE**

When inspecting the drives for conformity with on-site requirements the following items must be observed:

- total weight of casement (glass + frame),
- additional loads: snow load / wind load (suction / pressure),
- casement size (FAB x FAH),
- side ratio FAB / FAH,
- installation / inclination angle,
- required opening area (geometric / aerodynamic),
- crosswind influences,
- driving force and stroke,
- mounting site at the window frame and casement frame.

---

Environment with children / vulnerable people

Risk analysis according to the Machinery Directive required

Hold-to-run switch: stops movement at HSK < 20 mm at a closing force of > 150 N at HSK (20.ZAA.5)

Operating element in direct range of vision: a.) Key switch or b.) other switch, then: installation > 1,5 m, inaccessible for public (7.12.1)

The information in the brackets refer to the chapters of DIN EN 60335-2-103.

---

**Declaration of Conformity**

Power operated window + CE label
SAFETY INSTRUCTIONS

It is important to follow these instructions for the safety of persons. These instructions shall be kept in a safe place for the entire service life of the products.

**WARNING**

**Risk of crushing and entrapment! Window can close automatically!**
The integrated load cut-off stops the drive during closing and opening when the drive is overloaded.

The compressive force is absolutely sufficient to crush fingers in case of carelessness.

**NOTE**

All devices must be permanently protected from dirt and moisture, if the drive is not explicitly suitable for use in wet areas (see technical data).

**Area of application**
The drive shall only be used according to its intended use. For additional applications consult the manufacturer or his authorized dealer.

Do not misuse the drive for other lifting operations! Do not allow children to play with this drive or its regulating and / or control units, including the remote control!

Always check whether the system complies with current regulations. Special attention must be paid to the opening width, the opening area, the opening time and the opening speed of the window, the temperature range of the drives / external devices and cables as well as the cross section of the connecting cables as function of the cable length and power consumption.

All devices must be permanently protected from dirt and moisture, if the drive is not explicitly suitable for use in wet areas (see technical data).

**Installation**

These instructions address expert and safety-conscious electricians and / or qualified personnel knowledgeable in electrical and mechanical drive installation.

The safe operation, avoidance of injury to persons and damage to property, as well as risks, is only guaranteed by proper installation and setting according to these installation instructions.

All specifications for installation must be checked independently and, if necessary, adjusted at the installation site. The connection assignment, the electrical supply data (see machine plate) and performance limits (see technical data) as well as the mounting and installation instructions of the drive must be strictly observed and adhered to!

Never connect 24 V DC drives to 230 V AC mains voltage!

**Danger to life!**

Do not reach into the window rabbet or the operating element (chain or spindle) during installation and operation! Ensure that, based on the installation position and the opening movement of the casement, persons cannot be trapped between the driven part of the window and surrounding fixed components (e.g. wall).

**Mounting material**
The required mounting material must to fit with the drive and occurring load and, if necessary, supplemented.

Before installing the drive, check whether the casement is in good mechanical condition, the weight in balance and whether it opens and closes easily!

---

**Danger spots by crush and shear points**

<table>
<thead>
<tr>
<th>Side-hung</th>
<th>Bottom-hung</th>
<th>Roof windows / skylight domes</th>
<th>Louvre windows</th>
</tr>
</thead>
<tbody>
<tr>
<td>Danger spots: crush and shear points according to DIN EN 60335-2-103</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
**Crush and shear points**

To avoid injuries, **crushing and shear points** between casement and frame must be secured **against entrapment up to an installation height of 2,5 meters above the floor** with appropriate measures. This can be achieved e.g. by using contact-based or contactless protective devices against entrapment, which stop the motion through contact or through interruption by a person. At a force higher than 150 N at the main closing edge the motion must stop within 20 mm. A warning symbol at the opening element must indicate this clearly.

**Unintentional or independent opening or falling**

Casements are to be hinged or secured such way that in case one of the mounting elements fails it will not crash / slam down or move in an uncontrolled manner by e.g. using double suspensions, safety scissors, casement stays. Tilting windows shall be equipped with safety scissors or similar devices to avoid damages and risks of injury for persons through improper installation and operation. The safety scissors must be adjusted to the opening stroke of the drive (see technical data) to avoid blocking. The opening width of the safety scissors must be bigger than the drive stroke.

The movable casement must be secured against unintentional or independent opening as well as falling down.

**Routing cables and electrical connection**

Routing or installing of electrical cables and connections may be performed only by specialist companies. Never operate drives, control units, operating elements and sensors at operating voltages and connections contrary to the specifications of the manufacturer.

All relevant instructions shall be observed for the installation, specifically:

- VDE 0100 Setting up high-voltage systems up to 1000 V
- VDE 0815 Wiring cables
- Specimen Guideline on Conduits German designation (MLAR).

The types of cable, cable lengths and cross-sections shall be selected in accordance with the manufacturer’s technical data. If necessary, the cable types shall be coordinated with the competent local authorities and energy supply companies. Low-voltage lines (24 V DC) shall be routed separate from the high-voltage lines. Flexible cables may not be flush-mounted. Freely suspended cables shall be equipped with strain reliefs.

Clamping points shall be checked for tightness of threaded connections and cable ends. Access to junction boxes, clamping points and external drive control boxes shall be ensured for maintenance work.
Commissioning, operation and maintenance
After the installation and after each modification in the set up all functions shall be checked with a trial run. It shall be ensured that drive and casement are set correctly and that security systems, if available, are functioning properly.
After the installation of the system is completed the end-user shall be introduced to all important operating steps. If necessary, he must be advised of all remaining risks / dangers.
The end-user shall be specifically instructed that no additional forces, except pushing and pulling forces in the opening and closing direction of the casement, may be applied to the spindle, chain or lever of the drive.

Post warning signs!
During cleaning and maintenance works and while exchanging parts, all poles of the drive must be disconnected from the power supply and secured against unintentional reactivation.

Other persons must be kept away from the casement when a hold-to-run switch (pushbutton) is operated or when a window, which has been opened by a smoke and heat exhaust system, is closing!
The operating element of hold-to-run switches must be installed within direct view from the window, but apart from moving elements. If the switch is not a key-operated switch it must be installed at a minimum height of 1,5 m and inaccessible to the public!
Do not allow children to play with permanently mounted control devices and keep remote controls out of reach for children!

During cleaning, maintenance work and while exchanging parts the drive must be completely disconnected from the power supply and secured against unintentional reactivation.

Do not actuate the drive or the casement when repair or re-setting works are performed!

Replacement parts, fasteners and controls
The drive shall only be operated with control devices from the same manufacturer. There is no liability, warranty or customer service if third-party parts are used. Exclusively original replacement parts of the manufacturer shall be used for mounting elements or expansions.

Ambient conditions
The product may not be subjected to impacts or falls, or to vibrations, moisture, aggressive vapors or other harmful environments, unless the manufacturer released it for one or more of these environmental conditions.
- **Operation:**
  - Ambient temperature: -5 °C … +60°C
  - Relative humidity: < 90% less 20°C;
  - < 50% less 40°C;
  - no formation of condensation

Observe temperature range during installation!
- **Transport / Storage:**
  - Storage temperature: -5°C … +40°C
  - Relative humidity: < 60%

Accident prevention regulations and workmen’s compensation insurance guidelines
For work on or in a building or building part the provisions and instructions of the respective accident prevention regulations (local workmen’s compensation insurance guidelines) shall be observed and adhered to.

Declaration of Conformity and of Incorporation
The drive is manufactured and inspected in accordance with European guidelines. The respective Declaration of Conformity and of Incorporation is on hand.
In case that the use of the drive differs from the intended use, a risk evaluation for the power operated window shall be performed and a Declaration of Conformity according Machinery Directive 2006 / 42 / EG issued.

**EXPLANATIONS ON THE PRODUCT LABEL**

The product label informs about:
- manufacturer’s address
- article reference number and name
- technical characteristics
- date of manufacturing with firmware version
- certifications
- serial number

**NOTE** Never install and operate damaged products.

In the event of any complaints, please indicate the product serial number (SN) (see product label).
**Casement Sizes**

### Casement sizes
Mounting of drives up to a casement size of max. 4m² (depending on the system)

### Top-hung casement and Bottom-hung casement
+ **Inward opening**
  - FAB min. = L + 100 mm
  - FAB max. = 2500 mm

### Roof window
- FAH min. = 450 mm
- FAH max. = 2500 mm

**Total weight casement including snow load**
- KSA D 400 mm stroke ≤ max. 220 kg
- KSA D 600 mm stroke ≤ max. 150 kg
- KSA D 800 mm stroke ≤ max. 70 kg

### Snow load on roof windows for SHEV-systems
Example calculation:
- Establish snow loading based on national standards / directives (in Germany according to DIN 1055-5)
- Example: snow load = 60 kg
- (Casement area x Typical snow load)
- Example: FG = 40 kg
- Total weight = FG + snow load
- Example: total weight = (40 kg + 60 kg) = 100 kg
Assembly Instruction  
KSA D S12 24V DC

PREPARING ASSEMBLY

INSTALLATION STEP 1: INSPECTION BEFORE THE INSTALLATION

Important instructions for a safe installation. Observe all instructions, wrong installation may result in serious injury!

Storage of drives at the construction site
Protective measures against damages, dust, moisture or contamination shall be taken. Store drives immediately only in dry and well ventilated rooms.

Inspection of drives before installation
Check drives and window before installation for good mechanical condition and completeness. The chains / spindles of the drives must be extendable or retractable easily. The casement must run smoothly and the weight must be in balance.

We recommend the use of our test kit for the inspection of drives with the rated voltage 24V= / 230V~ (see table below). Damaged products may not be operated under any circumstance.

NOTE

The test procedure of drives may only be performed on a non-slip and secured mat or a test fixture. During the test run the test element must not be interfered with. The test may only be conducted by or under the supervision of expert personnel.

For testing chain drives the chain must be extended and retracted at an angle of approx. 90°. The spindle tubes of spindle drives in round housing tubes must be secured against independent spinning before starting the test to avoid deviations in the position encoder.

Inspection of the intended use
The planned use of the drive must be checked for compliance with its intended use. If used otherwise the liability and warranty claim expires.

Predictable misuse
It is imperative that foreseeable misuse of drives is avoided! Here are a few examples:

- do not connect 24 V DC drives to a 230 V AC mains voltage,
- observe synchronous run and sequence control by drives with multiple interconnection,
- use drives only indoors,
- avoid additional force influences, e.g. transverse forces.

Testing mechanical requirements
Prior to the start of the installation check whether:

- the support surface and the profile static for the load transmission is sufficient,
- a support construction for the secure fastening of the drives is required,
- cold bridges (thermal separation) are avoidable at action points,
- there is sufficient space for the swivel movement of the drive.

If not, counter measures must be taken!

The support surface of the frame brackets or casement brackets must rest completely on the window or frame profile. There must be no tilting of the fastening elements during extension and retraction of the drives. A safe and solid fastening must be ensured at the window profile.

It is imperative that the sufficiently mechanical stiffness of the fastener type as well as of the swivel range of the drive is observed.

If this is not guaranteed another type of fastening or another type of drive must be selected.

Test kit for drives

| Order number: | 533981 |
| Application:  | Test kit to check running direction and communication of drives 24V DC or 230V AC (including batteries) |
| Supply voltage: | 230V AC |
| Drive types:   | 24V DC / 230V AC |
| Drive current: | max. 3 A |
| Display:       | drive current, battery charge |
| Ambient temperature: | -5 °C ... + 40 °C |
| Plastic housing: | 250 x 220 x 210 mm |
| Weight:        | approx. 3.6 kg |
| Feature / equipment: | Control elements: 2 switches + 1 button |

![Test kit for drives image]
**INSTALLATION STEP 2: INSTALLATION PREREQUISITE AND INSTALLATION PREPARATION**

The following conditions must be fulfilled for the installation of the drives so they can be properly assembled with other parts and constructed to a complete machine at the window without impairing the safety and health of persons:

1. The design of the drive must fulfill the requirements.
2. The fastening accessories (casement brackets or frame brackets) must fit the window profile; the profile-dependent hole lay-out must be complied with.
3. The space required for the installation of the drive on the frame and casement profile must be sufficient.
4. The window must be in perfect mechanical condition before the installation. It should open and close easily.
5. The fastening material for the installation of the drive must fit the window material (see table).

### Tools required
- Marker,
- Grains,
- Hammer,
- Screwdriver (slotted-head, cross or Torx) size by site conditions,
- Hexagonal wrench size 3 / 4 / 5 / 6,
- Torque wrench,
- Power drill,
- Threadlock adhesive,
- possibly a tool for blind rivet nuts (size 6).

### Check window data on site
- Measure FAB and FAH.
- Check / calculate weight of casement.
- If unknown, it can be determined approximately with the following formula:

\[
G \text{ (Casement weight) } = \frac{F_{AB} \times FAH \times \text{Glass thickness}}{2.5 \times 1.1 \text{ (glass density) frame share}}
\]

- Check / calculate the required drive force and compare with drive data. If unknown, it can be determined approximately with the following formula:

\[
F_{[N]} = 5.4 \times G \text{ (kg) } \times FAH \text{ (m) } a \text{ (m)}
\]

- a = Distance of action point to hinges
- F = Drive force
- s = Stroke

### Scope of delivery:
Prior to assembly, check items quantity in the delivery for completeness.

  - **Height for stroke 500 / 600:** 774
  - **Height for stroke 800:** 879

**Hole Layout for Frame Bracket K-E1 and Casement Bracket F16-1 at AWS 57 RO (Schüco)**

**View „A“ - View without drive**

- **Hole Layout**
  - **Roof window**
  - **Casement Center**
  - **Height for stroke 400:** 674
  - **Height for stroke 500 / 600:** 774
  - **Height for stroke 800:** 879
**INSTALLATION STEP 5: Assembly casement brackets F14 / F16-1 / F38**

- Determine fastenings.
- Produce drill holes with appropriate cross-section (for the mounting dimensions please refer to the above-mentioned hole layout drawings (pages 11 - 14) or project-specific documents and drawings).

Carefully clear away drilling swarf to prevent seals from being damaged. Avoid surface scratches, for example by using masking tape.

- Secure fasteners against loosening; i.e. by applying removable thread-locking compound such as “Loctite”.

- Fit casement bracket F14 / F16-1 / F38. Make sure it is parallel to casement edge. „Casement bracket“ center and „chain output“ must be in line.
**INSTALLATION STEP 6A: Assembly frame brackets K-B1 / K-B2**

- Produce drill holes with appropriate cross-section (for the mounting dimensions please refer to the above-mentioned hole layout drawings (pages 9 - 12) or project-specific documents and drawings).
- Fit frame brackets (K-B1 oder K-B2).

![](image)

- Connect operating voltage (e.g. with a test device) and move chain out by approx. 100 mm.
- Connect chain with casement bracket. Pass shaft screw M6 through and tighten.
- Attach drive to the frame brackets.
- Insert brass washers and firmly tighten with countersunk screws M8. Drive should freely swivel.

![](image)

- Connect cable on or in the casement.
- Route cable on casement or in glazing bead.
- Make sure they are parallel to casement edge.

![](image)

- Connection cable routing on the casement:
  - The drive and its connection cable are swivelling. As a consequence, foresee cable routing with a loop.
  - The cable must be protected against damage (shearing-off, kinking, splitting), i.e. by using bushings.

![](image)

- Upon removal of the glazing bead is the danger that the glass may fall.

![](image)

- Connection cable routing on the hinge side:
  - Make sure that during opening or closing procedure the cable will not be damaged by shearing-off, kinking, crushing.
  - Protect cable feedthrough in profile e.g. by using cable bushings, cable transitions.
**INSTALLATION STEP 6B: Assembly frame bracket K-C1 / K-E1**

- Produce drill holes with appropriate cross-section (for the mounting dimensions please refer to the above-mentioned hole layout drawings (pages 9 - 12) or project-specific documents and drawings).
- Fit frame brackets (K-C1 oder K-E1).

⚠️ Make sure they are parallel to casement edge.

- Attach drive to the frame brackets.
- Insert brass washers 2 and firmly tighten with countersunk screws M8 1. Drive should freely swivel.

- Connect operating voltage (e.g. with a test device) and move chain out by approx. 100 mm.

- Connect chain with casement bracket. Pass shaft screw M6 through and tighten.

- Route cable on the frame or mullion/transom. The drive and its connection cable are swivelling. As a consequence, foresee cable routing with a loop. Cable must be protected against damage (shearing-off, kinking, splitting).

- Connect operating voltage (e.g. with a test device) and move chain out by approx. 100 mm.

⚠️ Check swiveling area (see chapter „SAFETY CHECK AND PERFORMING TEST RUN“). Ensure that drive and connection cable can swivel freely.

---

*Diagram showing the installation process.*
**Installation Step 7: Electric Connection**

Make sure when establishing the connection that there is no voltage at the terminals! Unused wires must be safely insulated!

The running direction of the drive may be changed by interchanging (polarity reversal) the wires “BN – (brown)” – “BU – (blue)”.

### Multi-drive Operation with Master and Slave

- **Master**: Connection drives do not work, if not connected.
- **Slave**: Connection cable.
- **Junction Box** (site-supplied): 24 V DC control from control unit.

**WH** is used for communication, with synchronized multi-drive operation.

### Multi-drive Operation with M-COM

- **Drive 1**: Connection drives do not work, if not connected.
- **Drive 2**: Connection cable.
- **Junction Box** (site-supplied): 24 V DC control from control unit.

**WH** is used for communication, with synchronized multi-drive operation.

### Connection Assignment

<table>
<thead>
<tr>
<th>Connection Assignment</th>
</tr>
</thead>
<tbody>
<tr>
<td>BN</td>
</tr>
<tr>
<td>BU</td>
</tr>
</tbody>
</table>

**WH** is used for communication, with synchronized multi-drive operation.

### Wire Colour Coding

- ** Colour**: DIN IEC 757
  - Black: BK
  - White: WH
  - Brown: BN
  - Blue: BU
  - Green / Yellow: GN / YE
  - Green: GN
  - Violet: VT
  - Grey: GY

### Direction of Travel

- **Open**: ➡️
- **Close**: ⬅️

### Polarity Reversal

![Polarity Reversal](image)

### M-COM (Main Control Unit)

- **Order Number**: 524177
- **Application**: Main control unit for the automatic configuration and monitoring of max. 2 opening / 2 locking drives type S12 / S3 (software version SW-V2) in multi-drive systems.
- **Rated Voltage**: 24V DC +/- 20%, (max. 2 Vss)
- **Current Consumption**: <12 mA
- **Drive Type**: S12
- **Protection Class**: IP30 rubber jacket
- **Ambient Temperature**: 0 °C ... + 70 °C
- **Dimensions**: 45 x 17 x 6 mm
- **Connecting Wires**: 3 wires 0,5 mm² x 50 mm
- **Feature / Equipment**: Printed circuit board with connecting wires for integration in site-supplied junction box.
### UniPC with configuration interface

| Order number: | 524178 |
| Application: | Hard- and software for configuration of drives supplied by Aumüller Aumatic GmbH |
| Rated voltage: | 24V DC +/-20% |
| Parameterizable drives: | 24V DC type MP, S3, S12, S12 V.2 |
| Scope of delivery: | Software UniPC (Downloadlink*), Interface "ParInt", USB cable, connection cable |

* [http://www.aumueller-gmbh.de/Downloads](http://www.aumueller-gmbh.de/Downloads)

---

### Features / Equipment:

Power supply 24V DC is not included in the scope of delivery! Any extended settings require a software licence. Any reconfiguration of a drive is entirely at the user's own risk and responsibility.

---

### Installation step 8: Soft run mode

**Soft run setting for drives with S12**

The drive has an electronic position detection. Just before the CLOSED position the chain retracts with reduced speed in the soft run mode, to protect the window and the drive.

- In soft run mode the zero-point - and thus the CLOSE-position of the window - is recognized.
- The drives with S12 must turn off in the soft run range (about 40 mm in front of the CLOSE-position).
- In closing direction in case of overload outside the 40 mm soft run range, the chain moves out by approximately 10 mm.

---

### Cable junction box (for renewal)

| Order number: | 513344 |
| Application: | to extend a drive cable |
| Rated voltage: | only for low voltage to max. 50V DC/AC |
| Material: | stainless steel (V2A) |
| Protection class: | IP 40 |
| Dimensions: | 25 x 27 x 150 mm |
| Equipment: | with cable gland PG9 (grey) including strain relief, with loose ceramic terminals. |

For multiple operation of the application is possible only with the master and slave. (without M-COM)
Installation step 9:
Supply lines of control unit to the drives
Observe current regulations and guidelines e.g. DIN 4102-12 regarding the “Fire behavior of building materials—circuit integrity maintenance of electric cable systems” (E30, E60, E90) and the “Specimen Guideline on Conduits German designation - MLAR”, and also prescribed constructional regulations!

For safety reasons a cable of the next higher wire cross section should be selected.

<table>
<thead>
<tr>
<th>Formula to calculate</th>
<th>the required wire cross-section of a supply line</th>
</tr>
</thead>
<tbody>
<tr>
<td>$A_{mm^2} = \frac{I_{A (total)} \times L_m \times 2}{2,0V \times (voltage\ drop) \times 56 \ m / (\Omega \cdot mm^2)}$</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Calculation example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Available data:</td>
</tr>
<tr>
<td>• cut-off current per drive (i.e. 2 x 4.0A) from data sheet</td>
</tr>
<tr>
<td>• length to be bridged from the last window to the control unit (i.e. 10 meters)</td>
</tr>
<tr>
<td>$A = \frac{(2 \times 4,0A) \times 10m \times 2}{2,0V \times 56m / (\Omega \cdot mm^2)}$</td>
</tr>
<tr>
<td>$A = 1,42mm^2 \rightarrow 1,5mm^2$ chosen</td>
</tr>
</tbody>
</table>

Laying and connecting the drive cable
• Avoid extreme temperature differences in the installation area (danger of condensation).
• Set clamping point close to window and ensure accessibility.
• Ensure expansion possibilities of the drive and the drive cable.
• Consider the cable length and the cross sections of the drives supply lines.

Installation step 10:
Safety check and test run
Check the mounted system for its safety; perform test run and commissioning.

Safety test:
• Connect operating voltage.
• Check fastening (frame brackets, casement brackets) for firm fit or tightening.

Test run:
• Visual inspection of casement movements.
• Stop immediately by malfunction!
• Pay attention to collision with facade construction and correct installation, if required.

Risk evaluation:
Before operating a power-operated window to which window drives were mounted, which were sold by the manufacturer as incomplete machines according to installation declaration, the possible risk to a hazard of persons must be determined, evaluated and minimized by taking appropriate technical measures in accordance with the Machinery Directive. Separate documents for performing a risk assessment can be downloaded from the homepage of Firm Aumüller Aumatic GmbH (www.aumueller-gmbh.de).

Operation of the power-operated window
When operating the power-operated window safety instructions must be observed, specifically those pertaining to commissioning, operation and maintenance.
# HELP IN CASE OF MALFUNCTIONS, REPAIRS AND MAINTENANCE

Professional repair of a defect drive can only be performed at the manufacturer's factory or manufacturer-certified specialist company. Unauthorized opening or manipulation of the drive terminates warranty.

1. Exchange defect drives or have them repaired by the manufacturer.
2. In case of problems during installation or normal operation the following table might be useful:

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes</th>
<th>Possible solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drive does not start</td>
<td>- Duration of mains power supply too short&lt;br&gt;- Drive run direction not correct&lt;br&gt;- Connecting cable not connected&lt;br&gt;- Power supply / Control Unit voltage incorrect, too high or too low (see data sheet)&lt;br&gt;- No mains supply to power supply unit / Control Unit (no voltage)&lt;br&gt;- Drive has shut down on overload</td>
<td>- Adjust supply voltage as specified in the technical documentation&lt;br&gt;- Check drive cables&lt;br&gt;- Check all connection cables&lt;br&gt;- Check power supply unit and replace if necessary&lt;br&gt;- Connect power supply&lt;br&gt;- First move drive in CLOSE position</td>
</tr>
<tr>
<td>Drive doesn’t start after having been in operation several times</td>
<td>- Operating time has been exceeded, drive has been overheated&lt;br&gt;- See possible solutions above associated with „Drive doesn’t start”</td>
<td>- Wait until drive has cooled down and start again&lt;br&gt;- See possible solutions associated with: “Drive doesn’t start”</td>
</tr>
<tr>
<td>Drive doesn’t close</td>
<td>- Closing edge safety mechanism has been triggered&lt;br&gt;- See possible solutions above associated with „Drive doesn’t start”</td>
<td>- Release safety area for operation and reset closing edge safety mechanism&lt;br&gt;- See possible solutions associated with: “Drive doesn’t start”</td>
</tr>
<tr>
<td>Drive travels unrestricted in open and close direction</td>
<td>- Residual ripple of power supply / control unit too high&lt;br&gt;- Fault in power supply unit / control unit</td>
<td>- Adjust drive voltage to the required value of drive. (values see data sheet of drive)&lt;br&gt;- Check output voltage of power supply unit or control unit</td>
</tr>
<tr>
<td>Drive closes, but after about 10 mm the drive open</td>
<td>- Close the window outside the 40 mm (Soft run mode).</td>
<td>- Drive mounted so, that the closing process takes place within the 40 mm (e.g. use spacer under the casement bracket).</td>
</tr>
</tbody>
</table>

# MAINTENANCE AND MODIFICATION

To ensure continuous function and safety of the drive periodic maintenance by a specialist company is required at least once a year (as mandated by law for smoke and heat exhaust systems). Operational readiness must be checked regularly. Frequent inspection of the system for imbalance and signs of wear or damages of cables and fastening elements must be performed.

During maintenance contaminations must be removed from the drive. Fastenings and clamping screws must be checked for tightness. Test runs during the opening and closing procedure of the devices must be performed.

The drive itself is maintenance-free. Defect devices may only be repaired in our factory. Only replacement parts of the manufacturer may be used. When the connection cable of this device is damaged it must be replaced by the manufacturer or his customer service or a similarly qualified person to avoid endangerment.

It is recommended to conclude a maintenance contract. A sample maintenance contract can be downloaded from the homepage of Firm AUMÜLLER AUTOMATIC GmbH (www.aumueller-gmbh.de).

While cleaning the windows, drives may not have direct contact with water or cleaning agents. Drives must be protected from dirt and dust during the construction phase or renovations.

## Maintenance process
1. Open or extend power-operated casement completely.
2. Completely disconnect the system from the mains and secure it against automatic or manual activation.
3. Check windows and fittings for damages.
4. Check all mechanical fastenings (if required, observe information on torques in installation instructions).
5. Check electric drives for damages and contaminations.
6. Check connecting cables (drive cable) for:
   - tightness of the cable screw
   - functionality of the strain relief
   - damages
7. Check the mobility of hinges and fittings and re-adjust or apply lubricant, e.g. silicone spray (observe the instructions of the manufacturer of this window system).
8. Check peripheral seal, remove contaminations or replace.
9. Perform cleaning to maintain functionality (e.g. clean extending elements of the drive, such as chains or spindles by damp wiping them with acid or lye-free agents and drying them and, if required, lubricate them with cleansing oil e.g., Ballistol).
10. Turn on operating voltage.
11. Open and close the power-operated window via the operating voltage (functional test).
12. If available, check and re-adjust protection systems of the safe guard fixture.
13. Check the intactness of the CE label at the power-operated system (e.g. SHEV/Natural smoke and heat exhaust ventilators).
14. Check the intactness of warning instructions and labels at the respective drive.
15. Perform a risk assessment in accordance with Machinery Directive 2006 / 42 / EG, if required, e.g. after modifying the machine.
**Demounting**

The drives are demounted by reversing the steps, as for the installation. The adjustments are omitted.

1. Completely disconnect the system from the power supply before demounting a drive.
2. After demounting a drive the window must be secured against independent opening.

Dispose of parts according to the locally applicable legal provisions.

**Disposal**

According to the European Directive 2012/19 / EU on Waste Electrical and Electronic Equipment (WEEE) and its transposition into national law, obsolete electrical appliances must be collected separately and sent for environmentally friendly recycling.

**Liability**

We reserve the right to change or discontinue products at any time without prior notice. Illustrations are subject to change. Although we take every care to ensure accuracy, we cannot accept liability for the content of this document.

**Warranty and Customer Service**

In principal apply our:

„General Terms for the Supply of Products and Services of the Electrical Industry (ZVEI)“.

The warranty corresponds with legal provisions and applies to the country in which the product has been acquired.

The warranty includes material and manufacturing defects incurred during normal use.

The warranty period for delivered material is twelve months.

Warranty and liability claims for personal injuries or material damages are excluded, if caused by one or more of the following:

- No proper incoming goods inspection.
- Improper use of the product.
- Improper installation, commissioning, operation, maintenance or repair of the product.
- Operating the product by defect and improper installed or not functioning safety and protection devices.
- Ignoring instructions and installation requirements in these instructions.
- Unauthorized constructional modifications at the product or accessories.
- Disaster situations due to effects of foreign bodies and Acts of God.
- Wear and tear.

Contact persons for possible warranty claims, for spare parts or accessories are the employees of the responsible branch office or the responsible person at
