WARNING

Failure to comply with the warning notes results in irreversible injuries or death.

Failure to comply with the warning notes can result in irreversible injuries or death.

Failure to comply with the warning notes can result in minor or moderate (reversible) injuries.

Failure to comply with the warning notes can lead to damage to property.

NOTE

Caution / Warning
Danger due to electric current.

Caution / Warning
Risk of crushing and entrapment during device operation (is provided as a sticker with the drive).

Attention / Warning
Risk of damage to / destruction of drives and / or windows.

TARGET GROUP

These instructions are intended for trained personnel and operators of systems for natural smoke ventilation (NRA / SHEV) (natural smoke exhaust system / smoke and heat exhaust system) and natural ventilation via windows, who are knowledgeable of operating modes as well as the remaining risks of the system.

This device is not intended for use by persons (including children) with physical, sensory or mental limitations or lacking experience and / or knowledge, unless they are supervised by a person who is responsible for the safety or were instructed by him on the usage of this equipment. Children should be supervised to ensure that they are not playing with this device. Cleaning and operator’s maintenance may not be performed by children without supervision.

Once the assembly and commissioning has been completed, the installer of a machine „power-operated window and door” shall hand these instructions over to the end-user. The end-user shall store these instructions in a safe place for further reference and use, if required.
INTENDED USE
Area of application / Scope of application
This drive is intended for the electromotive opening and closing of windows in facade and roof areas.

The main task of this product, in combination with a window and a suitable external control unit, is to evacuate hot smoke and combustion gases in case of fire, to safe human lives and protect material assets. Furthermore, with the electromotive operated window and a suitable external control unit, the natural ventilation of the building can be ensured.

By attaching the drive to a movable element of the window a so-called “power-operated window” is created which, according to the Machinery Directive 2006 / 42 / EG, represents a machine.

Intended use according
The drive is intended for stationary installation and electrical connection at the window as part of a building.

In accordance with the Declaration of Conformity the drive, in combination with an external Control Unit from AUMÜLLER, is released for its proper use at a power-operated window for the following use:

- Application for natural ventilation
  - with an installation height of the drive and the bottom side of sash of at least 2,5 m above the floor, or
  - with an opening width at the HSK of the driven part of < 200 mm by a simultaneous speed of < 15 mm/s at the HSK in closing direction.
- Application as NSHEV (natural smoke and heat exhaust ventilator(s) for ventilation without dual purpose for ventilation in accordance with EN12101-2.

Pay attention to possible hazards on tilting or rotating windows, whose secondary closing edges are located at less than 2,5 m installation height above the floor, under consideration of the Control Unit and usage!

We as manufacturers are well aware of our duties and responsibilities regarding the development, manufacturing and placing of safe window drives on the market and consistently implement them. Ultimately, however, we have no direct influence on the usage of our drives. Therefore, as a precaution, we point out the following:

- The constructor or his agent (architect, specialist planner) are obligated to evaluate the hazards to persons, outgoing from the usage, installation position, opening parameters and from the external Control Unit of the power operated window, already in the planning phase and to establish necessary protective measures.
- The constructor / manufacturer of the machine “power-operated window” must implement the planned protective measures at the installation site or, if not yet established, determine them by it’s own responsibility and detect or minimize possible remaining risks.

The need for a risk assessment at the installation site due to the reasonably foreseeable misuse.

A risk assessment in accordance with the Machinery Directive 2006 / 42 / EG for the usage of the power-operated window for natural ventilation is absolutely necessary under the following conditions:

- the installation height of the drive and lower edge of casement < 2,5 m above the floor and one of the following conditions:
  - the opening width at the HSK > 200 mm, or
  - the closing speed at the HSK is > 15 mm/s, or
  - the opening speed at the HSK is > 50 mm/s, or
  - the closing force at the HSK is > 150 N

The following flow chart can be applied, which also includes the protective measures in accordance with EN 60335-2-103/2016-05.
The casement measurements supplied are only for orientation purposes. It is imperative that the force-path diagram of the drives are observed.
SAFETY INSTRUCTIONS

It is important to follow these instructions for the safety of persons. These instructions shall be kept in a safe place for the entire service life of the products.

Risk of crushing and entrapment! Window can close automatically!
The integrated load cut-off stops the drive during closing and opening when the drive is overloaded.
The compressive force is absolutely sufficient to crush fingers in case of carelessness.

Area of application
The drive shall only be used according to its intended use. For additional applications consult the manufacturer or his authorized dealer.

Do not misuse the drive for other lifting operations! Do not allow children to play with this drive or its regulating and/or control units, including the remote control!

Always check whether the system complies with current regulations. Special attention must be paid to the opening width, the opening area, the opening time and the opening speed of the window, the temperature range of the drives/external devices and cables as well as the cross section of the connecting cables as function of the cable length and power consumption.

All devices must be permanently protected from dirt and moisture, if the drive is not explicitly suitable for use in wet areas (see technical data).

Installation
These instructions address expert and safety-conscious electricians and/or qualified personnel knowledgeable in electrical and mechanical drive installation.

The safe operation, avoidance of injury to persons and damage to property, as well as risks, is only guaranteed by proper installation and setting according to these installation instructions.

All specifications for installation must be checked independently and, if necessary, adjusted at the installation site. The connection assignment, the electrical supply data (see machine plate) and performance limits (see technical data) as well as the mounting and installation instructions of the drive must be strictly observed and adhered to!

Never connect 24 V DC drives to 230 V AC mains voltage! Danger to life!

Do not reach into the window rabbet or the operating element (chain or spindle) during installation and operation! Ensure that, based on the installation position and the opening movement of the casement, persons cannot be trapped between the driven part of the window and surrounding fixed components (e.g. wall).

Mounting material
The required mounting material must to fit with the drive and occurring load and, if necessary, supplemented.

Before installing the drive, check whether the casement is in good mechanical condition, the weight in balance and whether it opens and closes easily!
**Crush and shear points**

To avoid injuries, **crushing and shear points** between casement and frame must be secured **against entrapment up to an installation height of 2.5 meters above the floor** with appropriate measures. This can be achieved e.g. by using contact-based or contactless protective devices against entrapment, which stop the motion through contact or through interruption by a person. At a force higher than 150 N at the main closing edge the motion must stop within 20 mm. A warning symbol at the opening element must indicate this clearly.

**Unintentional or independent opening or falling**

Casements are to be hinged or secured such way that in case one of the mounting elements fails it will not crash / slam down or move in an uncontrolled manner by e.g. using double suspensions, safety scissors, casement stays. Tilting windows shall be equipped with safety scissors or similar devices to avoid damages and risks of injury for persons through improper installation and operation. The safety scissors must be adjusted to the opening stroke of the drive (see technical data) to avoid blocking. The opening width of the safety scissors must be bigger than the drive stroke.

The movable casement must be secured against unintentional or independent opening as well as falling down.

**Routing cables and electrical connection**

Routing or installing of electrical cables and connections may be performed only by specialist companies. Never operate drives, control units, operating elements and sensors at operating voltages and connections contrary to the specifications of the manufacturer.

All relevant instructions shall be observed for the installation, specifically:

- VDE 0100  Setting up high-voltage systems up to 1000 V
- VDE 0815  Wiring cables
- Specimen Guideline on Conduits German designation (MLAR).

The types of cable, cable lengths and cross-sections shall be selected in accordance with the manufacturer’s technical data. If necessary, the cable types shall be coordinated with the competent local authorities and energy supply companies. Low-voltage lines (24 V DC) shall be routed separate from the high-voltage lines. Flexible cables may not be flush-mounted. Freely suspended cables shall be equipped with strain reliefs.

Cables must be laid such way that they cannot be sheared off, twisted or bent during operation. Drive cables laid inside window profiles must be protected by insulating tubes with a sufficient temperature resistance. Through holes shall be equipped with cable sleeves!

Clamping points shall be checked for tightness of threaded connections and cable ends. Access to junction boxes, clamping points and external drive control boxes shall be ensured for maintenance work.
Commissioning, operation and maintenance
After the installation and after each modification in the set up all functions shall be checked with a trial run. It shall be ensured that drive and casement are set correctly and that security systems, if available, are functioning properly.
After the installation of the system is completed the end-user shall be introduced to all important operating steps. If necessary, he must be advised of all remaining risks / dangers.
The end-user shall be specifically instructed that no additional forces, except pushing and pulling forces in the opening and closing direction of the casement, may be applied to the spindle, chain or lever of the drive.

Post warning signs!
During cleaning and maintenance works and while exchanging parts, all poles of the drive must be disconnected from the power supply and secured against unintentional reactivation.

Other persons must be kept away from the casement when a hold-to-run switch (pushbutton) is operated or when a window, which has been opened by a smoke and heat exhaust system, is closing!
The operating element of hold-to-run switches must be installed within direct view from the window, but apart from moving elements. If the switch is not a key-operated switch it must be installed at a minimum height of 1,5 m and inaccessible to the public!
Do not allow children to play with permanently mounted control devices and keep remote controls out of reach for children!

Ambient conditions
The product may not be subjected to impacts or falls, or to vibrations, moisture, aggressive vapors or other harmful environments, unless the manufacturer released it for one or more of these environmental conditions.

- **Operation:**
  - Ambient temperature:  -5 °C … +60°C
  - Relative humidity:  < 90% less 20°C;
  - < 50% less 40°C;
  - no formation of condensation

- **Transport / Storage:**
  - Storage temperature:  -5°C … +40°C
  - Relative humidity:  < 60%

Accident prevention regulations and workmen’s compensation insurance guidelines
For work on or in a building or building part the provisions and instructions of the respective accident prevention regulations (local workmen’s compensation insurance guidelines) shall be observed and adhered to.

Declaration of Conformity and of Incorporation
The drive is manufactured and inspected in accordance with European guidelines. The respective Declaration of Conformity and of Incorporation is on hand.

In case that the use of the drive differs from the intended use, a risk evaluation for the power operated window shall be performed and a Declaration of Conformity according Machinery Directive 2006 / 42 / EG issued.
DATA SHEET LLA10 / LLA16 S12 24V DC

- Application: natural ventilation, SHEV, ferralux®-NSHEV
- Internal Intelligent Control Electronics S12
- DIP-Switches for the selection of the running direction and solo-/synchronised run
- Reed-contakt for the activation of the emergency closing programm functions
- Self learning stroke recognition
- Robust corrosion-resistant design
- Easy installation by concealed holes below the oblique end caps
- Coupling adapter with milling groove Ø13,3 x 9,2 mm (standard) - Customized coupling adapter on request

Options
- Programmable: synchronised run (max. 4 drives) and special functions
- Programmable: sequence control with FV locking drives (S3 / S12 SW V2)
- Programmable: electronic soft-start, soft-close and soft-stop at end of stroke control
- Programmable: stroke, force, speed
- Programmable: Reverse in overload cut-off during the closing process
- Customized stroke on request

EXPLANATIONS ON THE PRODUCT LABEL

The product label informs about:
- manufacturer’s address
- article reference number and name
- technical characteristics
- date of manufacturing with firmware version
- certifications
- serial number

NOTE Never install and operate damaged products.

In the event of any complaints, please indicate the product serial number (SN) (see product label).
**INSTALLATION STEP 1: INSPECTION BEFORE THE INSTALLATION**

Important instructions for a safe installation. Observe all instructions, wrong installation may result in serious injury!

**WARNING**

Storage of drives at the construction site
Protective measures against damages, dust, moisture or contamination shall be taken. Store drives intermittently only in dry and well ventilated rooms.

**Inspection of drives before installation**
Check drives and window before installation for good mechanical condition and completeness. The chains / spindles of the drives must be extendable or retractable easily. The casement must run smoothly and the weight must be in balance.

We recommend the use of our test kit for the inspection of drives with the rated voltage 24V = / 230V ~ (see table below). Damaged products may not be operated under any circumstance.

**Table: Test kit for drives**

| Order number: | 533981 |
| Application: | Test kit to check running direction and communication of drives 24V DC or 230V AC (including batteries) |
| Supply voltage: | 230V AC |
| Drive types: | 24V DC / 230V AC |
| Drive current: | max. 3 A |
| Display: | drive current, battery charge |
| Ambient temperature: | -5 °C ... + 40 °C |
| Plastic housing: | 250 x 220 x 210 mm |
| Weight: | approx. 3,6 kg |
| Feature / equipment: | Control elements: 2 switches + 1 button |

The test procedure of drives may only be performed on a non-slip and secured mat or a test fixture. During the test run the test element must not be interfered with. The test my only be conducted by or under the supervision of expert personnel.

For testing chain drives the chain must be extended and retracted at an angle of approx. 90°. The spindle tubes of spindle drives in round housing tubes must be secured against independent spinning before starting the test to avoid deviations in the position encoder.

**Inspection of the intended use**
The planned use of the drive must be checked for compliance with its intended use. If used otherwise the liability and warranty claim expires.

**Predictable misuse**
It is imperative that foreseeable misuse of drives is avoided! Here are a few examples:
- do not connect 24 V DC drives to a 230 V AC mains voltage,
- observe synchronous run and sequence control by drives with multiple interconnection,
- use drives only indoors,
- avoid additional force influences, e.g. transverse forces.

**Testing mechanical requirements**
Prior to the start of the installation check whether:
- the support surface and the profile static for the load transmission is sufficient,
- a support construction for the secure fastening of the drives is required,
- cold bridges (thermal separation) are avoidable at action points,
- there is sufficient space for the swivel movement of the drive.

If not, counter measures must be taken!

The support surface of the frame brackets or casement brackets must rest completely on the window or frame profile. There must be no tilting of the fastening elements during extension and retraction of the drives. A safe and solid fastening must be ensured at the window profile.

It is imperative that the sufficiently mechanical stiffness of the fastener type as well as of the swivel range of the drive is observed.

If this is not guaranteed another type of fastening or another type of drive must be selected.
**PREPARING ASSEMBLY**

**INSTALLATION STEP 2: INSTALLATION PREREQUISITE AND INSTALLATION PREPARATION**

The following conditions must be fulfilled for the installation of the drives so they can be properly assembled with other parts and constructed to a complete machine at the window without impairing the safety and health of persons:

1. The design of the drive must fulfill the requirements.
2. The fastening accessories (casement brackets or frame brackets) must fit the window profile; the profile-dependent hole lay-out must be complied with.
3. The space required for the installation of the drive on the frame and casement profile must be sufficient.
4. The window must be in perfect mechanical condition before the installation. It should open and close easily.
5. The fastening material for the installation of the drive must fit the window material (see table).

### Tools required
- Marker,
- Grains,
- Hammer,
- Screwdriver (slotted-head-, cross- or Torx) size by site conditions,
- Hexagonal wrench size 2 / 2,5 / 3 / 4,
- Torque wrench,
- Power drill,
- Threadlock adhesive,
- possibly a tool for blind rivet nuts.

### Scope of delivery:
Prior to assembly, check items quantity in the delivery for completeness.

<table>

### Maximum pushing force
- Maximum pushing force / pullout force on the **LLA 10**: 1000 N.
- Maximum pushing force / pullout force on the **LLA 16**: 1600 N.

---

**Wood windows**
- Wood screws:
  - i.e. DIN 96, DIN 7996, DIN 571
  - round head with slot,
  - round head with cross,
  - hex head, special type

**Wood windows**
- Self-tapping screws, thread screws, sheet-metal screws
  - i.e. ISO 4762, ISO 4017, ISO 7049, ISO 7085, DIN 7500
  - cylinder head with hex socket, internal serration (Torx),
  - Phillips head or external hex head
  - blind rivet nut

**Steel, stainless steel, aluminum windows**
- Screws for plastic
  - i.e. DIN 95606, DIN 95607, ISO 7049, ISO 7085, DIN 7500
  - round head with cross, external hex head, Torx

**Plastic windows**
- Screws for plastic
  - i.e. DIN 95606, DIN 95607, ISO 7049, ISO 7085, DIN 7500
  - round head with cross, external hex head, Torx

---

**Recommendation:**
If possible, screw through two cavity webs.
INSTALLATION STEP 3: DIP SWITCH SETTING UND CONNECTION THE LOUVRE DRIVES

Loosen the screws (M3) and remove end caps from the louvre drive LLA 10 / LLA 16. The DIP switch 1 and 2 are inside the louvre drive LLA 10 / LLA 16 on the cable side.

DIP switch for running direction and operating mode

DIP switch 1: solo operation / multi-drive operation (synchron)
DIP switch 2: running direction (OPEN position)

Connection assignment (terminal) and DIP switch setting

Solo operation

Multi-drive operation (synchron) for max. 4 drives + special functions

Switch on the control voltage, when not mounted the louvre drive LLA 10 / LLA 16 and check the OPEN position.

If the OPEN position does not correspond to the on-site conditions, this must be corrected with the DIP switch in a voltage-free state.

Switch on the control voltage at the louvre drive LLA 10 / LLA 16 - in OPEN position (new OPEN position).

THE CLOSE position is recognized automatically during start-up.

Switch off the control voltage.

Mount the louvre drive(s) LLA 10 / LLA 16 on open louvre window (see next installation step).

Connection assignment

Terminal 1 BU = blue Supply line 24 V DC control
Terminal 2 BN = brown Supply line 24 V DC control
Terminal 3 WH = white Multi-drive operation (synchron)

22 - 33 V DC control voltage

supply line min. 2 x 0,5 mm²
INSTALLATION STEP 4: MOUNTING LOUVRE DRIVE

- Determine fastenings.
- Produce drill holes with appropriate cross-section. (For the mounting dimensions please refer to the below-mentioned hole layout drawings or project-specific documents and drawings).

![Assembly Instruction](image)

- Carefully clear away drilling swarfs to prevent seals from being damaged.
- Avoid surface scratches, for example by using masking tape.

- Fasten the louvre drive LLA 10 / LLA 16 with screws (M5). The window openers are installed surface mounted, at the side of the louvre window.

  ! Make sure they are parallel to the louvres.

- Secure fasteners against loosening; e.g. by applying removable thread-locking compound such as “Loctite”.

Hole layout: Mounting dimension on the louvre window frame

Position: factory settings

Position: reed-contact

For customized coupling adapter e.g. for screw head M8

DIN 912 / ISO 4762

Side for cable connection and setting the DIP switches
CUSTOMIZED COUPLING ADAPTER

It is possible to customise the followers (coupling adapter) which transfer the drive power to the housing. Please contact our service department.

The coupling adapter are made from polyamide (PA6) as standard and have a cutout of Ø13,3 x 22,5 x 8 mm.

EMERGENCY CLOSING APPLICATION (TROUBLESHOOTING)

Louvre drive does not move in CLOSE direction - despite the control voltage applied

The emergency closing application of drive, suitable for post cycle control, can be blocked (e.g. contamination, mechanical or thermally caused change of the louvre). In this case a reed-contact is available - to activate the emergency closing application.

- Eliminate the cause of the blockade (eliminate the contamination, consider permissible operating temperature etc.).
- Interrupt control voltage. Switch afterwards control voltage in OPEN direction.
- Switch control voltage in CLOSE direction.
- If the louvre drive LLA 10 / LLA 16 does not close completely, activate the emergency closing application. Therefore hold a magnet over the integrated reed-contact.
- The louvre drive LLA 10 / LLA 16 move in CLOSE direction with a delay of approx. 2 seconds.
- After this procedure the LLA 10 / LLA 16 must open and close again correctly.
- If the louvres does not open properly, please contact our service.

INSTALLATION STEP 5: LEARNING PROCESS WITH UniPC - REQUIRED STROKE

For the louvre drive in the UniPC a separate „plugin“ is available.

- Connect computer, Interface „ParInt“ and drives (see Assembly and Commissioning Instructions UniPC).

  NOTE
  If only one drive is programmed, an additional power supply is not necessary.

- Start the software UniPC with a double-click.

  NOTE
  For information about the exact procedure and the functions of the software UniPC please refer to the „Help / User’s Manual“.

- Observe the LED reaction of the „ParInt - UniPC“.
- The LED flashes red.
- Switch on the supply voltage (24 V DC) in CLOSE direction.
- Start the stroke measurement. Therefore activate the switch „stroke measurement“ in the software UniPC - see button „Settings“.
- The louvre drive(s) move(s) in OPEN position and then into the CLOSE position - with reduced speed.
- Now the end of stroke control is be saved. The opening and closing system is ready for operation.
- The learning process can be repeated at any time (e.g. for component exchange or false installation).

Caution in multi-drive operation:

During the learning process is no mutual run monitoring.

If suddenly one drive stops, the total system must be stopped immediately manually. Therefore, the installer must have a switch-off capability (emergency shutdown) - in sight of the drives.

NOTE
If an exchange or a factory inspection is necessary, all drives must always be replaced or checked with the multi-drive operation.

Further drive parameters, eg. speed, stroke force and rebate control are freely programmable for the specific object.
**INSTALLATION STEP 6: CABLE ROUTING ON THE LOUVRE WINDOW**

- Route cable on the frame from the louvre window. Cable must be protected against damage (shearing-off, kinking, splitting).

![Diagram of cable routing on the louvre window]

- Cable duct glued on (in addition secured with countersunk screws against breaking away)
**INSTALLATION STEP 7: ELECTRIC CONNECTION**

Make sure when establishing the connection that there is no voltage at the terminals! Unused wires must be safely insulated!

</tr>
</tbody>
</table>

---

**Features / Equipment:**
Power supply 24V DC is not included in the scope of delivery! Any extended settings require a software licence.

Any reconfiguration of a drive is entirely at the user’s own risk and responsibility.

---

**Assembly Instruction**

LLA 10 / LLA 16
**INSTALLATION STEP 8:**
Supply lines of Control Unit to the Drives

Observe current regulations and guidelines e.g. DIN 4102-12 regarding the “Fire behavior of building materials-circuit integrity maintenance of electric cable systems” (E30, E60, E90) and the “Specimen Guideline on Conduits German designation - MLAR”, and also prescribed constructional regulations.

For safety reasons a cable of the next higher wire cross section should be selected.

---

**INSTALLATION STEP 9:**
Safety check and Test run

Check the mounted system for its safety; perform test run and commissioning.

**Safety test:**
- Connect operating voltage.
- Check fastening (frame brackets, casement brackets) for firm fit or tightening.

**Test run:**
- Visual inspection of casement movements.
- Stop immediately by malfunction!
- Pay attention to collision with facade construction and correct installation, if required.

**Risk evaluation:**
Before operating a power-operated window to which window drives were mounted, which were sold by the manufacturer as incomplete machines according to installation declaration, the possible risk to a hazard of persons must be determined, evaluated and minimized by taking appropriate technical measures in accordance with the Machinery Directive. Separate documents for performing a risk assessment can be downloaded from the homepage of Firm Aumüller Aumatic GmbH (www.aumueller-gmbh.de).

---

**Formula to calculate**
The required wire cross-section of a supply line

\[
A_{\text{mm}^2} = \frac{I_{\text{A (total)}} \cdot L_{\text{m (length supply line)}} \cdot 2}{2,0V_{\text{(voltage drop)}} \cdot 56\ m / (\Omega \cdot \text{mm}^2)}
\]

**Calculation example**

Available data:
- cut-off current per drive (i.e. 2 x 4.0A) from data sheet
- length to be bridged from the last window to the control unit (i.e. 10 meters)

\[
A = \frac{(2 \times 4,0A) \cdot 10m \cdot 2}{2,0V \cdot 56m / (\Omega \cdot \text{mm}^2)}
\]

\[
A = 1,42\text{mm}^2 \rightarrow 1,5\text{mm}^2\ chosen
\]

---

**Laying and connecting the drive cable**
- Avoid extreme temperature differences in the installation area (danger of condensation).
- Set clamping point close to window and ensure accessibility.
- Ensure expansion possibilities of the drive and the drive cable.
- Consider the cable length and the cross sections of the drives supply lines.

---

**Operation of the power-operated window**

When operating the power-operated window safety instructions must be observed, specifically those pertaining to commissioning, operation and maintenance.
### Help in Case of Malfunctions, Repairs and Maintenance

Professional repair of a defect drive can only be performed at the manufacturer's factory or manufacturer-certified specialist company. Unauthorized opening or manipulation of the drive terminates warranty.

1. Exchange defect drives or have them repaired by the manufacturer.
2. In case of problems during installation or normal operation the following table might be useful:

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes</th>
<th>Possible solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Louvre drive does not start</td>
<td>• Duration of mains power supply too short</td>
<td>• Adjust supply voltage as specified in the technical documentation</td>
</tr>
<tr>
<td></td>
<td>• Drive run direction is not correct</td>
<td>• Check drive cables change polarity</td>
</tr>
<tr>
<td></td>
<td>• Connecting cable not connected</td>
<td>• Check all connection cables</td>
</tr>
<tr>
<td></td>
<td>• DIP switch is wrong setting</td>
<td>• Setting the DIP switch properly</td>
</tr>
<tr>
<td>Louvre drive doesn't start after having been in operation several times</td>
<td>• Operating time has been exceeded, drive has been overheated</td>
<td>• Wait until drive has cooled down and start again</td>
</tr>
<tr>
<td></td>
<td>• See possible solutions above associated with „Drive doesn’t start“</td>
<td>• See possible solutions associated with: “Drive doesn’t start”</td>
</tr>
</tbody>
</table>

### Maintenance and Modification

To ensure continuous function and safety of the drive periodic maintenance by a specialist company is required at least once a year (as mandated by law for smoke and heat exhaust systems). Operational readiness must be checked regularly. Frequent inspection of the system for imbalance and signs of wear or damages of cables and fastening elements must be performed.

During maintenance contaminations must be removed from the drive. Fastenings and clamping screws must be checked for tightness. Test runs during the opening and closing procedure of the devices must be performed.

The drive itself is maintenance-free. Defect devices may only be repaired in our factory. Only replacement parts of the manufacturer may be used. When the connection cable of this device is damaged it must be replaced by the manufacturer or his customer service or a similarly qualified person to avoid endangerment.

It is recommended to conclude a maintenance contract. A sample maintenance contract can be downloaded from the homepage of Firm Aumüller Aumatic GmbH (www.aumueller-gmbh.de).

While cleaning the windows, drives may not have direct contact with water or cleaning agents. Drives must be protected from dirt and dust during the construction phase or renovations.

### Maintenance Process

1. Open or extend power-operated casement completely.
2. Completely disconnect the system from the mains and secure it against automatic or manual activation.
3. Check windows and fittings for damages.
4. Check all mechanical fastenings (if required, observe information on torques in installation instructions).
5. Check electric drives for damages and contaminations.
6. Check connecting cables (drive cable) for:
   - tightness of the cable screw
   - functionality of the strain relief
   - damages
7. Check the mobility of hinges and fittings and re-adjust or apply lubricant, e.g. silicone spray (observe the instructions of the manufacturer of this window system).
8. Check peripheral seal, remove contaminations or replace.
9. Perform cleaning to maintain functionality (e.g. clean extending elements of the drive, such as chains or spindles by damp wiping them with acid or lye-free agents and drying them and, if required, lubricate them with cleansing oil e.g., Ballistol).
10. Turn on operating voltage.
11. Open and close the power-operated window via the operating voltage (functional test).
12. If available, check and re-adjust protection systems of the safe guard fixture.
13. Check the intactness of the CE label at the power-operated system (e.g. SHEV/Natural smoke and heat exhaust ventilators).
14. Check the intactness of warning instructions and labels at the respective drive.
15. Perform a risk assessment in accordance with Machinery Directive 2006 / 42 / EG, if required, e.g. after modifying the machine.
Assembly Instruction
LLA 10 / LLA 16

Disposal / Warranty

Demounting
The drives are demounted by reversing the steps, as for the installation. The adjustments are omitted.
1. Completely disconnect the system from the power supply before demounting a drive.
2. After demounting a drive the window must be secured against independent opening.
Dispose of parts according to the locally applicable legal provisions.

Disposal
According to the European Directive 2012/19 / EU on Waste Electrical and Electronic Equipment (WEEE) and its transposition into national law, obsolete electrical appliances must be collected separately and sent for environmentally friendly recycling.

Warranty and Customer Service
In principal apply our:
„General Terms for the Supply of Products and Services of the Electrical Industry (ZVEI)“.
The warranty corresponds with legal provisions and applies to the country in which the product has been acquired.
The warranty includes material and manufacturing defects incurred during normal use.
The warranty period for delivered material is twelve months.
Warranty and liability claims for personal injuries or material damages are excluded, if caused by one or more of the following:
• No proper incoming goods inspection.
• Improper use of the product.
• Improper installation, commissioning, operation, maintenance or repair of the product.
• Operating the product by defect and improper installed or not functioning safety and protection devices.
• Ignoring instructions and installation requirements in these instructions.
• Unauthorized constructional modifications at the product or accessories.
• Disaster situations due to effects of foreign bodies and Acts of God.
• Wear and tear.
Contact persons for possible warranty claims, for spare parts or accessories are the employees of the responsible branch office or the responsible person at
Firm Aumüller Aumatic GmbH.
Contact data are available at our homepage
(www.aumueller-gmbh.de)

Liability
We reserve the right to change or discontinue products at any time without prior notice. Illustrations are subject to change. Although we take every care to ensure accuracy, we cannot accept liability for the content of this document.
CERTIFICATE AND DECLARATION OF CONFORMITY

We declare under our sole responsibility that the product described under “Data sheet” is in conformity with the following directives:

• 2014/30/EU
  Directive relating to Electro-Magnetic Compatibility
• 2014/35/EU
  Low voltage Directive

We further declare that the drive is an incomplete machine within the meaning of the European Machinery Directive (2006/45/EG).
